To all my loyal existing customers and potential new ones:

After forty-three years in engineering and eighteen years writing Doctor Walt's books I'm approaching an historic milestone.

The KeyCreator books listed in this brochure represent books 90 through 98 of the total books I've written under the Doctor Walt's trademark. Assuming my mouse doesn't stage a revolt, I'll most likely pass the 100 book milestone before the end of this year.

As you might have guessed, nothing gives me greater pleasure than helping you to master the intricacies of CAD modeling. Writing about a versatile package like KeyCreator makes it twice as much fun. Every year, more and more power is added to this amazing software. My goal is to make sure that newcomers get a good start and longtime users don't overlook the powerful new features that continually appear.

If you've never purchased one of my books, please call me. Your time is valuable and I can slash the amount of time it takes for you to become productive. Customers continually remark that using just a few examples from any of my books more than pays for the total book cost.

If you've used my books years ago and haven't purchased one recently, call me. This is not your father's CADKEY! There are so many new tools "oldtimers" overlook because they "know it all!" I'm not picking on you! At the ripe old age of 64, I'm an "oldtimer" too and I've got a mop of white hair to prove it!

Also don't forget if you have a child, grandchild or know a young student anywhere who shows an interest in design, engineering, or graphics, you want to seriously consider my Doctor Walt's KeyCreator CAD for Kids. They can use it with any commercial or educational seat of KeyCreator. (Contact Kubotek for information on Educational KeyCreator Software.) The large full color illustrated book takes your child step by step through an extensive, very-easy-to-learn CAD education. The enclosed CDROM contains house parts, furniture, creature parts, robot parts, and car parts that can be copied and used in any file. These are full solid models that can be sliced, diced, rendered just like we do with our commercial engineering models. What an amazing way to interest a young mind in the power of CAD!
